1. Introduction

The syllabus for Geography at undergraduate level using the Choice Based Credit system has been framed in compliance with model syllabus given by UGC.

The main objective of framing this new syllabus is to give the students a holistic understanding of the subject giving substantial weightage to both the core content and techniques used in Geography. The syllabus has given equal importance to the two main branches of geography – Physical and Human.

The ultimate goal of the syllabus is that the students at the end are able to secure a job. Keeping in mind and in tune with the changing nature of the subject, adequate emphasis has been given on new techniques of mapping and understanding of the subject.

The syllabus has also been framed in such a way that the basic skills of subject are taught to the students, and everyone might not need to go for higher studies and the scope of securing a job after graduation will increase.

While the syllabus is in compliance with UGC model curriculum, but since it did not offer much choice on electives in Physical Geography, one more elective "Soil and Biogeography" has been added.

This new syllabus will train undergraduates to get jobs in the information and technology areas as there is great demand for preparation of digital maps and storage and retrieval of geospatial data.
